

Report:

Under-Graduates and Post-Graduates

Graduate Survey 2015: Undergraduate and Postgraduate

This report compares Graduate Survey 2015 results of undergraduates and postgraduates. The first section of the report discusses the working status of undergraduates compared to the working status of postgraduates and specified by gender, working sector and several other variables including the acquired skills required in the labor market. The second section compares and discusses the differences between postgraduates and undergraduates based on year of graduation 2010/2009 or 2013/2012, and discusses their current employment status and job sector.

The main findings presented in this report are summarized below:

- The employment of post-graduate is (4.5) points higher than the employment of undergraduates .
- Most of postgraduates and undergraduates are employed by the public sector, however, a higher percentage of postgraduates has been employed in the private sector compared to the undergraduates employed in the same sector .
- Both postgraduate and undergraduate males are generally more employed than the females who graduated with the same educational qualification. Postgraduates females generally tend to be slightly more employed than undergraduate females .
- It was found that there were increased opportunities of training offered to graduates of 2009/2010 compared to graduates of 2012/2013 .
